SUMMARY

Backend engineer with seven years of experience on systems where a bug moves real money. At bunq I own the crypto integration and have shipped staking, savings, and tax-reporting products handling millions of euros. Before that I ran blockchain nodes and indexers on AWS and built trading bots and backtesting tools for leveraged liquidity pools. My main stack is Node.js, TypeScript, PostgreSQL, and Elasticsearch, with Python for tooling.

EXPERIENCE

Backend Engineer 2024 - Present
bunq.com

- Own the cryptocurrency integration end to end, built on Kraken's service suite.
- Shipped staking, savings, and tax-reporting products handling millions of euros.
- Built backend services on a custom architecture, using Elasticsearch to make large, frequently queried datasets fast to access instead of querying SQL directly.

Blockchain Infrastructure Engineer 2022 - 2024
Autonomy Network

- Built on-chain backtesting tools for leveraged delta-neutral liquidity pools.
- Developed, optimized, and monitored production trading bots.
- Ran high-performance blockchain nodes on AWS and set up infrastructure monitoring for them.
- Tools: Python, AWS, Docker.

Backend Engineer 2020 - 2022
Wallex.ir

- Set up Tron, Bitcoin, and Ethereum nodes and indexers.
- Built deposit and withdrawal services for EVM chains and a Bitcoin withdrawal service in Node.js.
- Built a rebalancing service for account-based blockchains in Node.js.
- Set up GitLab CI for a monorepo.

Technical Director 2021 - 2022
Sonido.io

- Wrote, tested, and deployed Solidity contracts for an NFT marketplace.
- Set up the platform's infrastructure.
- Managed a team of 4 developers.

DevOps/Backend Engineer 2018 - 2020
Address.ir

- Built a cross-company catalog publishing platform and REST API in Node.js, PostgreSQL, and Elasticsearch.
- Restored company internet connectivity during a nationwide outage.
- Ran A/B tests on machine learning models.
- Maintained production servers.

EDUCATION

Bachelor of Computer Engineering 2018
University of Tehran

- Thesis: Integration of Blockchain Infrastructure for Trust Management in IoT Devices within Supply Chain Systems.

SKILLS

Languages: Python, Node.js, TypeScript, SQL, PHP, Java

Data and search: PostgreSQL, MySQL, Redis, Elasticsearch, ORMs (TypeORM, Sequelize, Mongoose), data modeling, query optimization

Messaging and APIs: RabbitMQ, gRPC, REST, GraphQL

Blockchain: Tron, Bitcoin, Ethereum nodes and indexers, EVM, Solidity contracts

Infrastructure: AWS, Docker, GitLab CI, Git, infrastructure monitoring, Bash and POSIX-compatible shell scripting

Development: Planning, AI code generation, code review

LANGUAGES

- English: Fluent.
- Persian: Fluent.
- Turkish: Beginner.
